

ChemPro

SERVICES

INDUSTRIAL WEED CONTROL

What we can do for you...

ChemPro Services offers a variety of Herbicide Application Services. Our most common application is Industrial Weed Control, which is also referred to as “Bare Ground Weed Control”. This service is most often utilized in areas which mechanical cutting services are not the most practical for a complete maintenance solution, such as:

- Electric Substations
- Plant Sites
- Tank Batteries
- Laydown Yards
- Storage Areas
- Salvage Yards
- Oil and Gas Locations
- Railroad Tracks
- Sewer Lift Stations
- Water Tower Sites
- Telecommunication Sites
- Pipeline Valve Sites
- Parking Lots
- Fence Lines
- Gravel Roads
- Building Perimeters
- Miscellaneous Areas
- Solar Farms & Hydroelectric Sites

Tailored for you...

With the variety of site locations that this service is suited for, there are many types of programs that ChemPro can tailor to fit your specific needs. Locations that have used an herbicide program may benefit from chemistry changes and new seasonal rotations to help mitigate resistance challenges. Conversely, sites that have never used herbicides may initially benefit from multiple applications as they fit into a more routine maintenance schedule.

How to get started...

Our highly skilled service professionals can assist you in developing the most comprehensive herbicide strategy to meet your needs. ChemPro can estimate the amount of material you need, as well as the labor required to apply these herbicides. These estimations can be derived from acreage, or square footage combined with the number of applications necessary to achieve the appropriate level of control.

Steps to Proper Herbicide Program Development...

1. In-person site visit, introduction
2. Measure, or quantify the area(s) that need service
3. ChemPro Representative will present a proposal for service
4. Customer agrees to our proposal and payment terms
5. Schedule Application(s)

Additional Services...

- Custom Herbicide Application
- T&D Right of Way Herbicide Maintenance
- Pipeline Vegetation Management
- Roadside Herbicide Program Development
- Invasive Species Eradication
- Land Reclamation / Brush Clearing
- Erosion Repair / Ground Stabilization
- Turf Growth Regulation
- Ditch Bank Maintenance
- Municipal Herbicide Program Development
- IVM Consulting, Mapping, and Planning
- Rotary Cutting / Grounds Maintenance
- Asset Management
- Product Distribution
- Tree Planting and Mitigation Projects

Customers

- Plants and Various Industrial Sites
- Electrical Cooperatives and Municipal Utilities
- Oil & Gas Producers and Pipelines
- Federal Lands, State Parks, and Military Installations
- State DOTs and County Road Systems
- Ports, Railroads, and Transit Authorities
- Storage Areas, Laydown Yards, and Salvage Facilities
- Municipalities, Cities, Towns, and Districts
- Sustainable energy sites - Solar, Wind, and Hydro
